CASE STUDY:

Plant Engineering Nigeria Limited

HokuApps

01 INTRODUCTION

The pace of business is changing at a breakneck rate, and organizations need technologies that can help them adapt their processes just as quickly. This is particularly evident in the work of Plant Engineering Nigeria Limited, a leading supply chain and project management organization that supports customers with incredibly dynamic and complex needs.

ABOUT PLANT ENGINEERING NIGERIA LIMITED

Plant Engineering Nigeria Limited is among the world's leaders in providing global supply chain and project management capabilities for organizations in the oil and gas, cement, process, measurement solutions, power, electrical and instrumentation industries.

The organization has been serving in this role since 2009 and serves some of the world's most renowned original equipment manufacturers, including Pentair, Agair, Neterlocks, General Electric and McCrometer.

THE PROBLEM

02

The scale and complexity of services offered by Plant Engineering Nigeria Limited creates an operational climate in which business processes need to be changed on an almost daily basis. The organization needed its technology and process systems to be flexible and agile enough to keep pace with these changes, which meant that it also needed to be easily customizable.

The organization relies on a wide range of apps and services to get the job done, and had reached a point where customization always required a major project. The company wanted customization to be simple and easy, and it found HokuApps.

GAINING FLEXIBILITY THROUGH CUSTOMIZATION

Software without support is immediately less valuable as it will fall short the moment something goes wrong. The HokuApps ecosystem is flexible, highly customization, housed in a lightweight app that won't bog systems down and comes with robust support to ensure organizations are never left out in the cold with software that isn't getting the job done. These factors added up to make the HokuApps platform a perfect option because:

- **It makes easy app customization an option.**
- **It includes workflow management capabilities that make complex tasks seem simple.**
- **It features an email alert system that ensured users don't miss key details.**
- **It connects seamlessly with third-party apps to integrate data between various solutions.**

All of these capabilities set the foundation for HokuApps as a perfect option for Plant Engineering Nigeria Limited, but professionalism really set HokuApps apart from the competition. HokuApps is eager to work with its clients to fully understand their requirements and make solutions better accordingly.

IMPROVING EFFICIENCY WITH CUSTOM APPS AND WORKFLOWS

03

Implementing the HokuApps platform fueled considerable communications and efficiency gains for Plant Engineering Nigeria Limited, with key benefits including:

- **Reduced email usage and subsequent cost elimination.**
- **Real-time file sharing within the HokuApps platform.**
- **Flexibility to collaborate between geographically diverse work locations.**
- **Less dependence on intercom systems to communicate.**
- **More group chats and posts that everybody can see.**

HokuApps has made communication and file sharing a breeze for Plant Engineering Nigeria Limiting, empowering employees to work at their best and driving significant productivity gains.
